**DESCRIPTION OF MANUSCRIPT**

Manuscripts for full length Research articles (Research papers and Review papers) should be checked for spellings, punctuation, grammar and coherence. All references mentioned in the reference list should be cited in the text, and vice versa. On the top of this, it should be divided into the following sections (in this order): Title page; Abstract, key words; Introduction, Materials and Methods, Results and Discussion, Conclusion, Acknowledgements, References, Tables (each table complete with title and footnotes on a separate page) and illustrations and figures, graphical abstracts / highlights files (where applicable).

**Title page**

The title page should have the title of the manuscript and full name(s) of the author(s), institutional affiliations. It should also indicate name, address, email, fax, and telephone number(s) of the author responsible for correspondence about the manuscript. Email addresses of all authors is mandatory. Only standard abbreviations should be used within the title.

**Abstract**

Abstract of the manuscript should not exceed 250 words. The abstract should state briefly the purpose of the research, the principal results and major conclusions. It is often presented separately from the article, so it must be able to stand alone. For this reason, references should be avoided. Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

**Key words**

Bellow the abstract, a maximum of 5 keywords should be written, avoiding general and plural terms and multiple concepts like, "and", "of". These keywords will be used for indexing purposes.

**Introduction**

The introduction should clearly state background of the research which includes a summary of literature to indicate justification/rationale of the study and aims to contribute in field of study. It comprises of problem statement and the objectives of the study. Detailed literature survey and summary of results should be avoided.

**Materials and Methods**

Materials and methods include design, sampling procedures, measurements, data collection and analysis. Studies which involve human participants should have a detailed statement of ethical approval and consent in the methods.
Results and Discussion

Results should be clear and concise and represented by the pertinent findings in the text, tables and figures. Data repetition should be avoided in tables and figures. Result should match with the methods section. Research findings should be presented without interpretation and tables and figures should be highlighted in the text.

Discussion should explore the importance of the results of the work without repeating them. Results should be well interpreted with support of previous findings in this section. Avoid extensive citations and discussion of published literature. Be honest about acknowledging limitations.

Conclusion

Conclusion should state clearly the main inferences of the research findings and it should be self-explanatory and highlighting their importance and relevance.

Acknowledgements

Investigators should acknowledge individuals who substantially contributed for conception, design, acquisition, analysis and interpretation of data. Personnel involved in drafting and critically revising the manuscript and sources of funding also deserve to be acknowledged.

References

- Citation in text
- Reference style
- Journal article

TABLES, FIGURES AND SCIENTIFIC MEASUREMENTS

Tables and figures should be designed to be clear and easy to read. Information in tables and figures should not be repeated in the text but should emphasize the important findings. Tables should be numbered and referred in the text by their numbers e.g. Table 1. Start each table/figure on a new page after the reference list. Lines in tables should be kept minimum avoiding vertical lines. Footnotes should be in superscript letters to clarify points of potential ambiguity.

Illustrations should be given separately and numbered as figures in sequence like Fig. 1. Each figure should have a descriptive legend with citation in the text.
